

N-and Group and Fondazione Don Carlo Gnocchi Onlus together again for the project “Spazi che abbracciano la felicità”

Pognano (BG), Italy – Milan, Italy – 09/09/2025 – N-and Group, a leader in HMI technologies and digital solutions, and Fondazione Don Carlo Gnocchi Onlus, a national benchmark in the care and rehabilitation of people with disabilities and vulnerabilities, announce a new joint initiative in support of the Rehabilitation Department for Severe Acquired Brain Injuries at the IRCCS “S. Maria Nascente” in Milan.

This initiative renews and expands the collaboration launched in 2024, when N-and Group contributed to the creation of the Hygge Pediatric Rehabilitation Virtual Room, an innovative environment integrating immersive technology and rehabilitative therapy for young patients. Today, the commitment continues with a project that, during a phase of department expansion, focuses on improving common areas with therapeutic furnishings and digital entertainment technologies – essential elements for patients’ recovery paths and overall well-being of families.

The GCA Department of the IRCCS in Milan welcomes every year hundreds of adult and pediatric patients with severe brain injuries caused by trauma, strokes, hemorrhages, or anoxia. These are complex cases treated by a multidisciplinary team combining clinical and human expertise, integrating traditional rehabilitation methods with advanced technologies such as robotics and virtual reality. Expanding to 40 beds requires suitable common areas to support not only physical recovery, but also emotional and relational well-being.

“Supporting this project of Fondazione Don Gnocchi strengthens a bond built over time and renews a commitment that is very close to our hearts,” says Tarcisio Vergani, CEO of N-and Group. “We believe technology must always serve people, and in this case, our contribution aims to create environments that promote recovery, providing support not only to patients but also to their families – with particular attention to children in need of specialized care and a serene environment to grow and regain confidence.”

“Living spaces in rehabilitation departments are precious places of encounter and connection,” affirms Antonio Troisi, Northern Area Director of Fondazione Don Gnocchi. “Thanks to the support of partners like N-and Group, we can make these environments an integral part of the care process, improving the overall well-being of those facing complex rehabilitation paths and giving the most fragile moments of normality and play, even within a hospital setting.”

About N-and Group

Headquartered in Bristol with sites in the UK, Italy, and Hong Kong, N-and combines deep technical expertise with a collaborative, customer-oriented

approach to drive digital transformation across multiple sectors.

N-and Group specializes in the design, development, and production of advanced embedded solutions, including touchscreens, HMI edge, and user interfaces that redefine human-machine interaction. With expertise in IoT software platforms, business intelligence, connectivity services, and digital payment solutions, N-and enables companies to optimize operations and generate new revenue streams.

With a proven track record in delivering successful solutions to market, N-and provides innovative and highly customizable technologies tailored to the needs of industry-leading companies — from gym equipment and coffee machine manufacturers to vending operators and catering service providers.

About Fondazione Don Carlo Gnocchi Onlus

Active for over 70 years, Fondazione Don Carlo Gnocchi is one of Italy's leading organizations in the care, rehabilitation, and social integration of people with disabilities and vulnerabilities, with particular focus on children, dependent elderly, and patients with complex conditions.

Present in nine regions with an integrated network of over 50 facilities including residential centers and outpatient clinics, with 3,700 beds and 6,000 staff, it offers rehabilitation in neuromotor and cardiorespiratory areas, assistance services, palliative care, and international cooperation projects as an NGO.

Recognized as IRCCS for its centers of excellence in Milan and Florence, the Foundation complements clinical activities with strong research programs, collaborating with universities, institutions, and organizations at national and international levels. Its mission is centered on the person, combining medical expertise, technological innovation, and human care to improve the quality of life of patients and their families.
